ACADEMIC PROJECTS

Custom Loan Management System, | October 2025 - Present **Independent Project**

- Designed and coordinated a custom loan management system with *50+ menu-driven operations* for lenders handling both conventional and complex loan histories.
- Built workflows for client records, loan changes, installment schedules, single and multiple payments, loan pauses, interest charges, refinancing, and transaction corrections.
- Developed a financial dashboard and reports covering client account statements, portfolio performance, future cash flow, overdue payments, and upcoming collections, with PDF exports and client contact details
- Coordinated user testing, issue resolution, versioned releases, and updates across separate installations.

Lucky | Lead Developer & Software Architect | September 2026 – Present **Independent Project**

- Engineered a modular semi-autonomous AI agent in Python and Streamlit utilizing dual engines (Ollama and Gemini Cloud), a file-based configuration architecture (SOUL, IDENTITY, USER), and local JSON memory persistence.
- Developed an integrated email assistant sub-agent for automated inbox categorization and daily digests, while actively engineering additional specialized sub-agents to expand platform autonomy.
